

The transmission of Internet signals over power lines will cause unimaginable interference to most of the amateur frequencies which are frequently used for disaster relief assistance to many agencies. It will be impossible to operate an amateur radio station in the presence of the interference polluting the air from the wide bandwidth radiation from all the power lines where BPL is used. Please do not authorize the use of power lines for this purpose. I am a broadband internet

user as well as a licensed amateur radio operator and can't believe that you will make such a mistake and ruin my hobby of 57 years! Sincerely, Wilbur Carrington, W8YCI
